Cytopathology (from Greek κύτος, kytos, "a hollow"; πάθος, pathos, "fate, harm"; and -λογία, -logia) is a branch of pathology that studies and diagnoses diseases on the cellular level. The discipline was founded by George Nicolas Papanicolaou in 1928. Cytopathology is generally used on samples of free cells or tissue fragments, in contrast to histopathology, which studies whole ...

Here we present xCell, a novel gene signature-based method, and use it to infer 64 immune and stromal cell types. We harmonized 1822 pure human cell type transcriptomes from various sources and employed a curve fitting approach for linear comparison of cell types and introduced a novel spillover compensation technique for separating them.

Autoimmune Genes are Scattered throughout the Genome. Autoimmune genes are found in many chromosomes. For example, in systemic lupus erythematosus, over 80 genes have been identified in each of our 22 plus XY chromosomes, as nicely illustrated in this drawing (from Chen L et al, Curr Opin Rheumatol, 2017).. Since autoimmune disease genes are many and individually have low impact, they have ...
