Chemical Equations And Reactions Chapter 8

chemical equation represents, with symbols and formulas, the identities and relative amounts of reactants and products in a chemical reaction. The relative amounts of reactants and products represented in the equation must be adjusted so that the numbers and types of atoms are the same on both sides of the equation.

St. Charles Parish Public School System

A chemical equation is balanced so that the numbers of atoms of each type involved in a chemical reaction are the same on the reactant and product sides of the equation. A balanced chemical equation satisfies the law of conservation of mass, i.e., the total mass of the reactants is equal to the total mass of the products.
