Our results indicate a positive impact of the age group 50-64 on economic growth.

Moreover, a high proportion of people in the age group 15-29 facilitate technology absorption. The use of matched employer-employee data sets allows us to estimate age-productivity profiles at the firm level.

Fig. 1 shows that the annual growth rates of the population aged between 25 and 64 years have declined continuously over time, from about 3% in the late 1980s, to below 1% in the 2010s. The growth rates of the population aged 25-64 are forecasted as negative, and consequently, the size of the population aged
