Diseases Of The Vitreo Macular

Disease of the vitreo-macular interface is characterized by vitreo-macular adhesion (VMA), which can lead to abnormal forces on the retina termed vitreo-macular traction (VMT). This combination of VMA and VMT can itself cause impairment of vision and is implicated in a variety of disorders, including wet age-related macular degeneration, diabetic retinopathy, macular edema, and macular hole.

[Diseases of the vitreo-macular interface].

Vitreomacular adhesion (VMA) is a human medical condition where the vitreous gel (or simply vitreous, AKA vitreous humour) of the human eye adheres to the retina in an abnormally strong manner. As the eye ages, it is common for the vitreous to separate from the retina. But if this separation is not complete, i.e. there is still an adhesion, this can create pulling forces on the retina that may ...

Vitreomacular adhesion (VMA) can be serious, but it's treatable. It involves two parts of your eye. One is the vitreous, or the "jelly" part that fills the eyeball.

Vitreomacular Adhesion: What It Is, What to Watch For

Retinal diseases vary widely, but most of them cause visual symptoms. Retinal diseases can affect any part of your retina, a thin layer of tissue on the inside back wall of your eye. The retina contains millions of light-sensitive cells (rods and cones) and other nerve cells that receive and organize visual information.
