A biological hazard, or biohazard, is a biological substance that poses a threat to the health of living organisms, primarily humans. This could include a sample of a microorganism, virus or toxin that can adversely affect human health. A biohazard could also be a substance harmful to other animals. The term and its associated symbol are generally used as a warning, so that those potentially ...

Biological hazard - Wikipedia

Turbidity is the cloudiness or haziness of a fluid caused by large numbers of individual particles that are generally invisible to the naked eye, similar to smoke in air. The measurement of turbidity is a key test of water quality. Fluids can contain suspended solid matter consisting of particles of many different sizes. While some suspended material will be large enough and heavy enough to ...

Note that for this enum definition to be safe for updates one should define a value UNKNOWN = 0. Additionally, I would suggest to just drop the default case when switching over enum values since it might hide cases where handling of values was forgotten until runtime. Instead one should hardcode all values and use the UNKNOWN field to detect incompatibilities.
