Ten structural bulkheads add great stiffness to the hull and support a variety of fixed rowing seat geometries, depending on the racing ambitions of the crew. Hull #1 went together very quickly and without drama over the winter of 2015. Starting from a CNC-cut kit, initial hull assembly takes as little as three days.

On the basis of biochem. considerations and structural modeling, we hypothesize that Hg(Sec)4 is bound to the carboxy-terminus domain of selenoprotein P (SeIP) which contains 12 Sec residues. Structural flexibility allows SeIP to form multinuclear Hg_x(Se,Sec)_y complexes, which can be biomineralized to HgSe by protein self-assembly.
