The cells in all of the layers except the stratum basale are called keratinocytes. A keratinocyte is a cell that manufactures and stores the protein keratin. Keratin is an intracellular fibrous protein that gives hair, nails, and skin their hardness and water-resistant properties.The keratinocytes in the stratum corneum are dead and regularly slough away, being replaced by cells from the ...

Layers of the Skin | Anatomy and Physiology I - Lumen Learning

Support: Like a house is built around a supportive frame, a strong skeleton is required to support the rest of the human body. Without bones, it would be difficult for your body to keep its shape and to stand upright. Protection: Bones form a strong layer around some of the organs in your body, helping to keep them safe when you fall down or get hurt. . Your rib cage, for example, acts like a ...
